Question:

The impulse response of an LTI system is $h(t) = \delta(t) + 0.5\delta(t - 4)$, where $\delta(t)$ is continuous-time unit impulse signal. If the input signal $x(t) = \cos\left(\frac{7\pi t}{4}\right)$, the output is (GATE IN 2023)

$$\text{Transfer function } (H(s)) = \frac{Y(s)}{X(s)} \quad (9)$$

$$= \frac{0.5s}{s^2 + 30.2257} \quad (10)$$

$$= 0.5 \quad (11)$$

Solution:

Variable	Description	value
$\delta(t)$	continuous-time unit impulse signal	1 if $t=0$; 0 in other cases
$h(t)$	impulse response	$\delta(t) + 0.5\delta(t - 4)$
$x(t)$	input signal	$x(t) = \cos\left(\frac{7\pi t}{4}\right)$
$y(t)$	output signal	$x(t) * h(t)$
$Y(s)$	Laplace of $y(t)$	$\frac{0.5s}{s^2 + 30.2257}$
$X(s)$	Laplace of $x(t)$	$\frac{s}{s^2 + 30.2257}$
$\mathcal{L}(\cos \omega t)$	Laplace of $\cos \omega t$	$\frac{s}{s^2 + \omega^2}$

TABLE I

A TABLE WITH INPUT PARAMETERS

from Table I

$$y(t) = x(t) * h(t) \quad (1)$$

$$= x(t) * (\delta(t) + 0.5\delta(t - 4)) \quad (2)$$

$$= x(t) + 0.5x(t - 4) \quad (3)$$

$$= \cos\left(\frac{7\pi t}{4}\right) + 0.5\cos\left(\frac{7\pi(t - 4)}{4}\right) \quad (4)$$

$$= \cos\left(\frac{7\pi t}{4}\right) + 0.5\cos\left(\frac{7\pi t}{4} - 7\pi\right) \quad (5)$$

$$= 0.5\cos\left(\frac{7\pi t}{4}\right) \quad (6)$$

from Table I

$$Y(s) = \mathcal{L}\left[0.5\cos\left(\frac{7\pi t}{4}\right)\right] = \frac{0.5s}{s^2 + \left[\frac{7\pi}{4}\right]^2} \quad (7)$$

$$\text{similarly } X(s) = \frac{s}{s^2 + \left[\frac{7\pi}{4}\right]^2} \quad (8)$$
